

ABDALRAHMAN MAHMOUD

Data Analysis & Reporting | Power BI | AI Automation & Agents

Nablus, Palestine · 0597056219 · abdhabit3@gmail.com

PROFILE SUMMARY

MIS graduate and Data Analysis intern with hands-on experience building end-to-end reporting pipelines — from raw, unclean data to validated KPI dashboards. Skilled in Power BI, advanced Excel, and Python (pandas/numpy) for data cleaning, analysis, and automation. Built a working RAG-based LLM chatbot (LangChain, ChromaDB, sentence-transformers, LLM API integration) as part of a full-stack graduation project, with practical experience in process optimization and automated workflows. Experienced in coordinating with cross-functional staff to gather requirements and deliver clear, decision-ready reports, and in training non-technical colleagues on data tools.

WORK EXPERIENCE

Data Analysis & Automation Intern | Data Science Center — Najah Hospital | 2026 – Present

- Built a desktop automation tool that converts raw, unclean Excel data into validated reports with calculated KPIs and interactive dashboards — reducing manual reporting time from hours to minutes; 3 reports delivered and in active use to date.
- Perform data accuracy checks and validation routines to ensure consistency and reliability of reporting outputs before they reach management.
- Design and deliver an ongoing internal training series on Power Query, Pivot Tables, the Power BI interface, data modeling, DAX, and dashboarding to 8 hospital employees — building the organization's in-house reporting capacity.
- Work directly with hospital staff to understand reporting requirements and translate them into practical technical solutions, strengthening cross-team communication.

PROJECTS

Najah Library AI-Powered Website | Graduation Project — Lead Developer | 2025 – 2026

- Independently designed and built a full-stack web application for An-Najah University Library (Python, SQLite, ChromaDB), including a semantic search engine powered by sentence-transformers for natural-language queries, a hybrid KNN-based recommendation system for personalized book suggestions, and an Aspect-Based Sentiment Analysis module (fine-tuned MARBERT and CAMELBERT-MSA) to extract and classify sentiment from user feedback into actionable insight categories.
- Built an LLM-powered chatbot (RAG architecture) that answers user queries by retrieving relevant content from a ChromaDB vector database and passing it to an LLM via API calls — enabling accurate, source-grounded natural-language answers instead of relying on the model's unguided knowledge.

EDUCATION

Bachelor of Management Information Systems

An-Najah National University | 2022 – 2026 | GPA: 3.06

Relevant Coursework:

- Data Analysis, Business Intelligence, Database Management Systems, Systems Analysis & Design
- Machine Learning, Programming (Python, SQL), Descriptive & Inferential Statistics
- Principles of Accounting, Financial Accounting

COURSES

- Power BI Masterclass — O'Reilly (Completed)
- AI Career Accelerator — Birzeit University (In Progress)
- Sales and Marketing — Arab-European Foundation (Completed)
- AI + Data — Milestones (In Progress)

SKILLS

- Data Analysis & Reporting: Advanced Excel (complex formulas, Pivot Tables), statistical summaries, periodic reporting
- Power BI: Power Query, DAX, data modeling, interactive dashboards
- AI & Automation: Process optimization, automated workflows, AI agents, RAG (Retrieval-Augmented Generation), LangChain, LLM API integration, vector databases (ChromaDB, sentence-transformers)
- Programming & Data Quality: Python (pandas, numpy, matplotlib), SQL, data validation and accuracy verification
- Computer Proficiency: Microsoft Office (Excel, Word, PowerPoint) | Languages: Arabic (Native), English (B2) | Other: Cross-functional collaboration, technical training delivery, problem solving
